PROFESSIONAL EXPERIENCE

Walmart Data Ventures

Chicago, IL · Sep 2024 – Present

Senior Data Analyst

- Built and shipped to production an autonomous Jira ticket-resolution agent with agentic RAG: 6-gate triage, MCP-driven context gathering, FAISS + BM25 retrieval over 11,000 historical SQL queries, and self-healing execution with a 10-retry budget. Closed 400+ data requests across 8 categories over 15 months and cut routine turnaround from 30–60 minutes to under 10 minutes per request. Shipped a real LLM product people depended on daily.
- Designed and shipped to production a self-service analytics agent over 67 BigQuery tables with sub-agent orchestration and human-in-the-loop validation (Context Researcher → SQL Drafter → Validator → Devil's Advocate); built an 8-rule deterministic SQL guardrail set and a 23-case golden-query evaluation suite to measure accuracy. Approved by Sr. Director and product leadership and currently the only AI skill in active use by business teams on Data Ventures.
- Built a registry-governed semantic layer over BigQuery that boxes the LLM into semantic parsing — one call, strict JSON intent, never SQL — with deterministic validation, value canonicalization, and a deterministic SQL compiler, making the only probabilistic step regression-testable. Designed for sensitive, governed data with a human review gate on definition changes.
- Built and deployed to production a headless KPI monitor on a 6-hour cron that detects threshold breaches, runs root-cause analysis, and posts Slack alerts; decision logs and state persist to BigQuery for end-to-end observability and telemetry.
- Partnered cross-functionally with Product, Data Science, and business stakeholders to translate ambiguous user needs into agent-ready specs and reliable shipped features.
- Delivered 5 Power BI dashboards ranked top 1.4% of Walmart's 207,000 dashboards (1,064 views, 22 users); cut data-request turnaround from 1–24 hours to 5–10 minutes; Making a Difference Award.
