

Openers Cheat Sheet

Patrick / BCG X · glance, don't read · ~60–75s each

TELL ME ABOUT YOURSELF

- **Open:** Data analyst on Customer Perception — 1M-member panel — I'm the **bottleneck** between the data and 30+ business & technical folks.
- **Proof:** **400+ Jira tickets** since Jan · 30 min–full day each → **under 10 min, async, 20 at once.**
- **How:** Built on a **context layer** → evolved to a **deterministic semantic layer** → not freeform LLM SQL, **governed definitions.**
- **Adoption:** Today my **team runs these as skills & sub-agents in their own coding CLIs.**
- **Close** → **BCG:** That's the AI Factory role — build assets a **whole firm** adopts, not just my 30.

WHY THIS ROLE

- **Open:** It's the work I already do — **bigger blast radius.**
- **Leverage math:** One good build = **30 people** here → at AI Factory **one asset** → **hundreds of consultants.**
- **Range:** Apply how I build **across industries**, not one product.
- **Peers:** Build **alongside other builders**, not the team of one I am today.
- **Close:** That range + leverage + room of builders = **the problem I want to work on.**
